

Dens[®] Suite

Gypsum Products

Glass Mat Gypsum for All Your Building Needs

Discover the Georgia-Pacific Advantage

Installing single-manufacturer solutions like the Dens[®] Suite of Products means:

-  Limited warranties for exposure to normal weather conditions*
-  Reliable, in-field technical support from project conception to completion
-  Innovation and experience from the company that pioneered fiberglass mat gypsum technology

*Does not include DensShield Tile Backer or DensDeck Roof Boards.

The Benefits of Fiberglass Mat Gypsum

Improve the resiliency of your commercial and residential projects with panels that:

-  Have more moisture and mold resistance than paper-faced wall panels
-  Help you stay on schedule now while avoiding costly repairs in the future
-  Prevent moisture damage during construction and minimize mold growth as your structures age
-  Are non-combustible and slow the spread of flames and smoke in the event of a fire

Interior Solutions

DensArmor Plus[®] Interior Panels

For flat or curved structures in spaces prone to high humidity, like basements and bathrooms.

DensGlass[®] Shaftliner

1-inch-thick fiberglass mat gypsum panels used in UL fire-rated shaftwalls, stairwells and separation-wall assemblies. Also used in horizontal shaftwalls and ducts.

DensShield[®] Tile Backer

The first backer board engineered with a built-in moisture barrier to prevent damage to the sub-floor or wall cavity. Allows you to skip the step of installing a secondary moisture barrier, making installation easier and reducing labor. Cuts and installs like drywall without needing special tools or fasteners. For ceramic tile underlayment, including bathroom remodels and pool areas.

Exterior Solutions

DensGlass[®] Sheathing

The #1 architecturally specified fiberglass mat gypsum sheathing. A preferred substrate under brick, stone, stucco, siding and EIFS.

DensElement[®] Barrier System

Integrated gypsum sheathing used with high-performance accessories to create a water-resistant barrier and air barrier (WRB/AB) system. Helps reduce trips around the building and can be installed in all weather conditions to help mitigate risks while achieving faster dry-in.

Roofing Solutions

DensDeck[®] Roof Boards

A family of gypsum cover boards for added protection against fire, wind, puncture and hail for commercial low slope roofs. Reinforces your roof to help avoid callbacks for repairs, increases its lifespan and gets it ready for future rooftop installations.
